

AI BOARDROOM – COMPLETE MASTER PROJECT PROMPT

Project Overview

Build a production-grade AI-powered platform called **AI Boardroom**.

AI Boardroom is a collaborative multi-agent decision intelligence platform where users can submit ideas, datasets, documents, business plans, research papers, marketing strategies, financial reports, and other project-related information.

The platform should simulate a virtual executive boardroom in which multiple specialized AI agents analyze the same problem from different perspectives, collaborate through controlled discussions, and produce both individual reports and a final executive recommendation.

The platform should prioritize:

- Scalability
 - Reliability
 - Accountability
 - Explainability
 - Professionalism
 - High-quality user experience
 - Enterprise-grade architecture
 - Visually appealing modern design
-

Core Vision

The goal is NOT to create another chatbot.

The goal is to create an AI-powered boardroom where a user can receive expert-level analysis from multiple perspectives in a structured, collaborative, transparent, and explainable manner.

The platform should function as a virtual panel of experts capable of evaluating:

- Startup ideas
- Business proposals
- Product concepts
- Research papers
- Datasets
- Financial reports

- Marketing strategies
- Organizational decisions
- Project plans

The system should provide:

1. Individual expert analyses
 2. Collaborative boardroom discussion
 3. Consensus generation
 4. Executive summary
 5. Final recommendation
-

User Flow

Step 1 – Authentication

Users arrive at a premium authentication page.

Features:

- Sign Up
- Login
- Google Authentication
- Microsoft Authentication
- Password Recovery
- Session Management

User information should be stored securely in the database.

After successful authentication:

User → Dashboard

Step 2 – Dashboard

Dashboard should provide:

- Create New Analysis
- Recent Projects
- Previous Reports
- Saved Sessions
- Team Workspace (future)
- Settings

- Profile Management

Dashboard should immediately communicate professionalism and intelligence.

Step 3 – Create Analysis

Users can submit:

Idea Input

Free-text explanation.

Example:

"I want to build an AI-powered education platform."

File Uploads

Supported formats:

- PDF
 - DOCX
 - PPT
 - TXT
 - CSV
 - XLSX
 - JSON
-

Mixed Inputs

Users may combine:

- Text description
- Business plans
- Datasets
- Research papers

into one boardroom session.

Architecture

Frontend

Technology Stack:

- Next.js
- React
- TypeScript
- Tailwind CSS
- shadcn/ui
- Framer Motion
- React Three Fiber
- Drei
- Zustand

Requirements:

- Fully responsive
 - Dark mode
 - Light mode
 - Professional UI
 - Smooth animations
 - Interactive dashboards
-

Backend

Technology Stack:

- FastAPI
- Python

Responsibilities:

- Authentication
 - File Processing
 - Agent Orchestration
 - API Management
 - Session Management
 - Report Generation
-

Database Architecture

PostgreSQL

Store:

- Users
- Projects
- Sessions
- Agent Outputs
- Discussion Logs
- Reports
- Confidence Scores
- Audit Trails

Qdrant

Store:

- Vector embeddings
- Session memory
- Agent memory
- Document chunks
- Knowledge base

S3 Storage

Store:

- PDFs
- DOCX files
- PPT files
- Excel files
- Generated reports
- User uploads

AI Architecture

CEO Agent (Orchestrator)

Responsibilities:

- Understand user input
- Classify project type
- Select appropriate agents
- Create shared workspace
- Manage discussions
- Coordinate workflow

The CEO Agent should NOT be the final decision-maker.

Expert Agents

Strategic Agent

Responsibilities:

- Vision analysis
 - Long-term potential
 - Strategic opportunities
-

Business Agent

Responsibilities:

- Market analysis
 - Competitor analysis
 - Business model review
 - Revenue opportunities
-

Financial Agent

Responsibilities:

- Cost analysis
- ROI calculations
- Financial projections
- Profitability assessment

Technical Agent

Responsibilities:

- Feasibility analysis
 - Architecture review
 - Technology recommendations
 - Scalability analysis
-

Data Agent

Responsibilities:

- Dataset analysis
 - Trend detection
 - Forecasting
 - Statistical insights
-

Customer Agent

Responsibilities:

- User needs
 - Customer adoption
 - User personas
 - Customer concerns
-

Risk Agent

Responsibilities:

- Legal risks
 - Technical risks
 - Operational risks
 - Financial risks
-

Devil's Advocate Agent

Responsibilities:

- Challenge assumptions

- Identify weaknesses
 - Generate counterarguments
 - Simulate failure scenarios
-

Reviewer Agent

Responsibilities:

- Collect all findings
 - Detect contradictions
 - Detect agreements
 - Generate confidence scores
 - Produce final recommendation
-

Performance Optimization

Implement the following mandatory optimizations:

Dynamic Agent Selection

Only relevant agents should be activated.

Examples:

Startup Idea:

- Strategic
- Business
- Financial
- Customer
- Risk

Dataset:

- Data
- Financial
- Business

Research Paper:

- Technical
- Strategic
- Risk

Avoid unnecessary agent execution.

Parallel Processing

Selected agents should execute simultaneously.

Do NOT use sequential execution.

Goal:

Reduce latency and increase scalability.

Shared Memory & RAG

All agents should access a common knowledge workspace.

Workflow:

Documents → Chunking → Embeddings → Qdrant → Retrieval → Agents

Agents should never repeatedly process the same documents.

Collaboration Layer

Create a boardroom-style discussion system.

Round 1: Independent analysis

Round 2: Review others' findings

Round 3: Challenge and refine findings

STOP

Maximum three rounds.

Avoid endless debates.

Decision Engine

Generate confidence-based recommendations.

Possible outputs:

- GO
- GO WITH MODIFICATIONS
- NEEDS FURTHER RESEARCH
- NOT RECOMMENDED

Each recommendation should include reasoning and confidence scores.

Report Generation

Generate:

1. Strategic Report
2. Business Report
3. Financial Report
4. Technical Report
5. Data Report
6. Customer Report
7. Risk Report
8. Contrarian Report
9. Boardroom Discussion Report
10. Executive Summary

Export Formats:

- PDF
 - DOCX
 - PPT
-

Monitoring & Accountability

Maintain:

- Agent logs
- Prompt logs
- Decision logs
- Session history

- Audit trails

Users should be able to understand why a recommendation was generated.

Transparency is mandatory.

AI Model Layer

Use a multi-model architecture.

Supported providers:

- OpenAI
- Anthropic
- Gemini

Implement:

- Model routing
 - Cost optimization
 - Fallback mechanisms
 - Reliability controls
-

Visual Design System

Theme

The platform should feel like:

Apple Vision Pro

+ Modern Executive Boardroom

+ Futuristic AI Workspace

Design Goals

- Bold
- Dynamic
- Premium
- Professional

- Futuristic
- Immersive

Avoid:

- Generic dashboards
- Plain corporate websites
- Basic chatbot interfaces

3D User Experience

Implement:

- React Three Fiber
 - Three.js
 - Interactive 3D scenes
 - Floating glass panels
 - Dynamic depth effects
 - Cinematic lighting
-

Boardroom Visualization

Create a 3D virtual boardroom.

Example Layout:

CEO

Business Technical

Financial Customer

Risk Devil's Advocate

Each seat represents an active agent.

During analysis:

- Active seats glow
 - Agent status updates live
 - Users can observe progress in real time
-

Signature Experience

The platform should make users feel:

"I am presenting my idea before a board of intelligent experts."

Not:

"I uploaded a file to another AI chatbot."

The AI Boardroom experience must be immersive, collaborative, transparent, professional, visually impressive, and capable of delivering trustworthy decision intelligence at scale
